

Victoria Aerial Lift Training

Victoria Aerial Lift Training - An aerial work platform is a mechanical access platform. This particular machine provides access to otherwise not accessible places for equipment or people. Also known as an aerial device or elevating work platform, the device is normally utilized to access high areas. Construction and maintenance staff often should make use of aerial work platforms on the job. They are used by firefighters for emergency access.

The aerial work platform is intended to temporary application, providing access to high places. They are meant to be operated by one individual, with the capability of lifting weights of not more than one ton. Some types have higher load limits. There are different kinds of aerial work platforms; like for instance, there is a "scissor lift" and a "cherry picker".

Several aerial work platforms are available outfitted along with compressed air connectors for power tools or electrical outlets. For specialist jobs, such as lifting frames for window glass, an aerial work platform may come along with special tools.

Anybody needed to operate an aerial lifting device requires training, together with their bosses. Members of Health & Safety Committees and representatives responsible for inspecting aerial machine work areas likewise need to undergo training. Trainees will know aerial lifting device operation. They would also know the rules which apply to the safe use of these machinery. Regulations vary from province to province, and in worksites which are federally regulated.

Anyone who is required to be lifted by or work near an aerial lifting device needs to be informed concerning potential dangers. An Aerial Lift Training Video could be shown in a general safety session to be able to educate all of the workers who work near them or are lifted by them.

The majority of Aerial Lift Training Program will consist of modules that are focused on the following areas: Aerial Lift Devices and Operating Controls; Hazard Identification; Platform Positioning & Park Positioning and Pre Operational Checks for Aerial Lift Devices. The program is designed to train workers on the safe use of self-propelled, boom supported elevated work platform and self-propelled, elevated work platform. A certificate will be provided to employees who complete the program, signed by a qualified individual to be able to confirm the successful completion of a hands-on practical exam.
