

Victoria Manlift Operator Certification

Victoria Manlift Operator Certification - We provide a scissor platform and aerial lift certification and training to empower the one training with the knowledge and general understanding of the efficient and safe use of "Power Operated Mobile Work Platforms," based on the current regulations in the industry. Upon successfully completing the training, those participating would be able to understand and know certain safety and health related hazards associated with using scissor and aerial lifts.

There are different affiliated places in your district providing Manlift Operator Certification Programs. Those training are provided with in-depth instruction about safe utilization and regulations along with extensive hands-on training. The level of skill and knowledge of each and every individual training is evaluated and people who are capable of demonstrating a satisfactory level of operational competence will receive Operator Certification cards and employee documentation.

Theory Training

The trainer guides those training through an interactive and comprehensive review during the theory training. The operator course book is studied that covers all relevant rules. Other subject matters like various machine kinds in addition to different applications and sizes, safe operating measures, pre-use inspections and general work place safety are individually explored.

Theory Evaluation

The evaluation of the theory parts starts with a written test, that focuses on the course concepts which was covered in the reference handbook. Tests are graded and returned to the trainee. Afterward the tests are reviewed to ensure understanding and a minimum score of 70 percent is required in order to pass this part of the training.

Practical Training

The hands-on portion of the course is covered in the practical training. Here, trainees are shown the safe operating measures, the shutdown and parking procedures and the pre-use inspection procedures. Each and every one training has the chance to operate the machine and practice the skills they learned throughout Theory Training under the course trainer's helpful eye in a setting that is safety controlled.

Practical Evaluation

The Practical Evaluation is where the ones training are evaluated to assure they have reached a minimum level of skill. The ones training are then evaluated on an individual basis using the machine in a reasonably challenging course setting. When the assessment is done, the ones training are de-briefed and given the chance to deal with whatever issues they may have about whatever portion of the program. Every employer of a successful trainee would be sent the official records and documents immediately after the program has been finished.
